

AMS to Show Off Sensors at CES

Sunday, 30 December 2018

Sensor solutions provider AMS will exhibit new sensing technologies for the mobile devices, consumer electronics and automotive sectors at CES in a few days' time.

For automotive applications, they'll be showing 3D Face ID, a facial recognition system deploying 3D sensors for drivers to access automotive control with advanced security. Also on display will be Projected Lighting with micro lens array (MLA) which project sharp images onto flat surfaces with light projection.

"At AMS, sensing is life, and our ground-breaking sensor solutions touch every aspect of people's lives today," said CEO Alexander Everke. "We invest to remain at the forefront of technology to create new market trends, helping our customers differentiate while providing excitingly useful technology to their customers."
