

SEGULA Technologies, the French global engineering group, announces the acquisition of EK Design, a German company specializing in automotive, industrial and specialty vehicles, and involved in the entire development process, from design through to production series.

Only a few months after the acquisition of Technicon Design in the field of Automotive Style, this operation once again illustrates the strong growth of Segula Technologies, which now has 11,000 employees in 26 countries.

"For Segula Technologies, whose automotive and industrial vehicles constitute the historic core business, this operation demonstrates its desire to make a lasting commitment to the heart of the German automotive industry. Our group now has all the assets to position itself as a privileged partner of the sector: strengthened skills throughout the value chain, an extended local presence, and a responsiveness already recognized by many industrial players across the world," said Laurent Germain, President of Segula Technologies' International Department.

"Through this merger, we intend to continue and enrich the long-term relationships and trust established between EK Design and its customers. The portfolio of EK Design activities will not only be expanded with new skills, but will find in the global presence of Segula Technologies a lever to support the growing trend of internationalization of our clients' projects" added Jean Bernard Faivre, new Director General Germany and Austria, Segula Technologies.

The know-how of EK Design's 400 employees and their 25 years of expertise in Mechanical Engineering, Electrical & Electronics, Lighting and Signage, Interior & Exterior Equipment, are real assets in the conquest of new Premium projects.

Segula Technologies is now benefiting from the know-how of nearly 550 employees in Germany and Austria, on which it wishes to continue strengthening in the coming months.
